

OPEN AIR

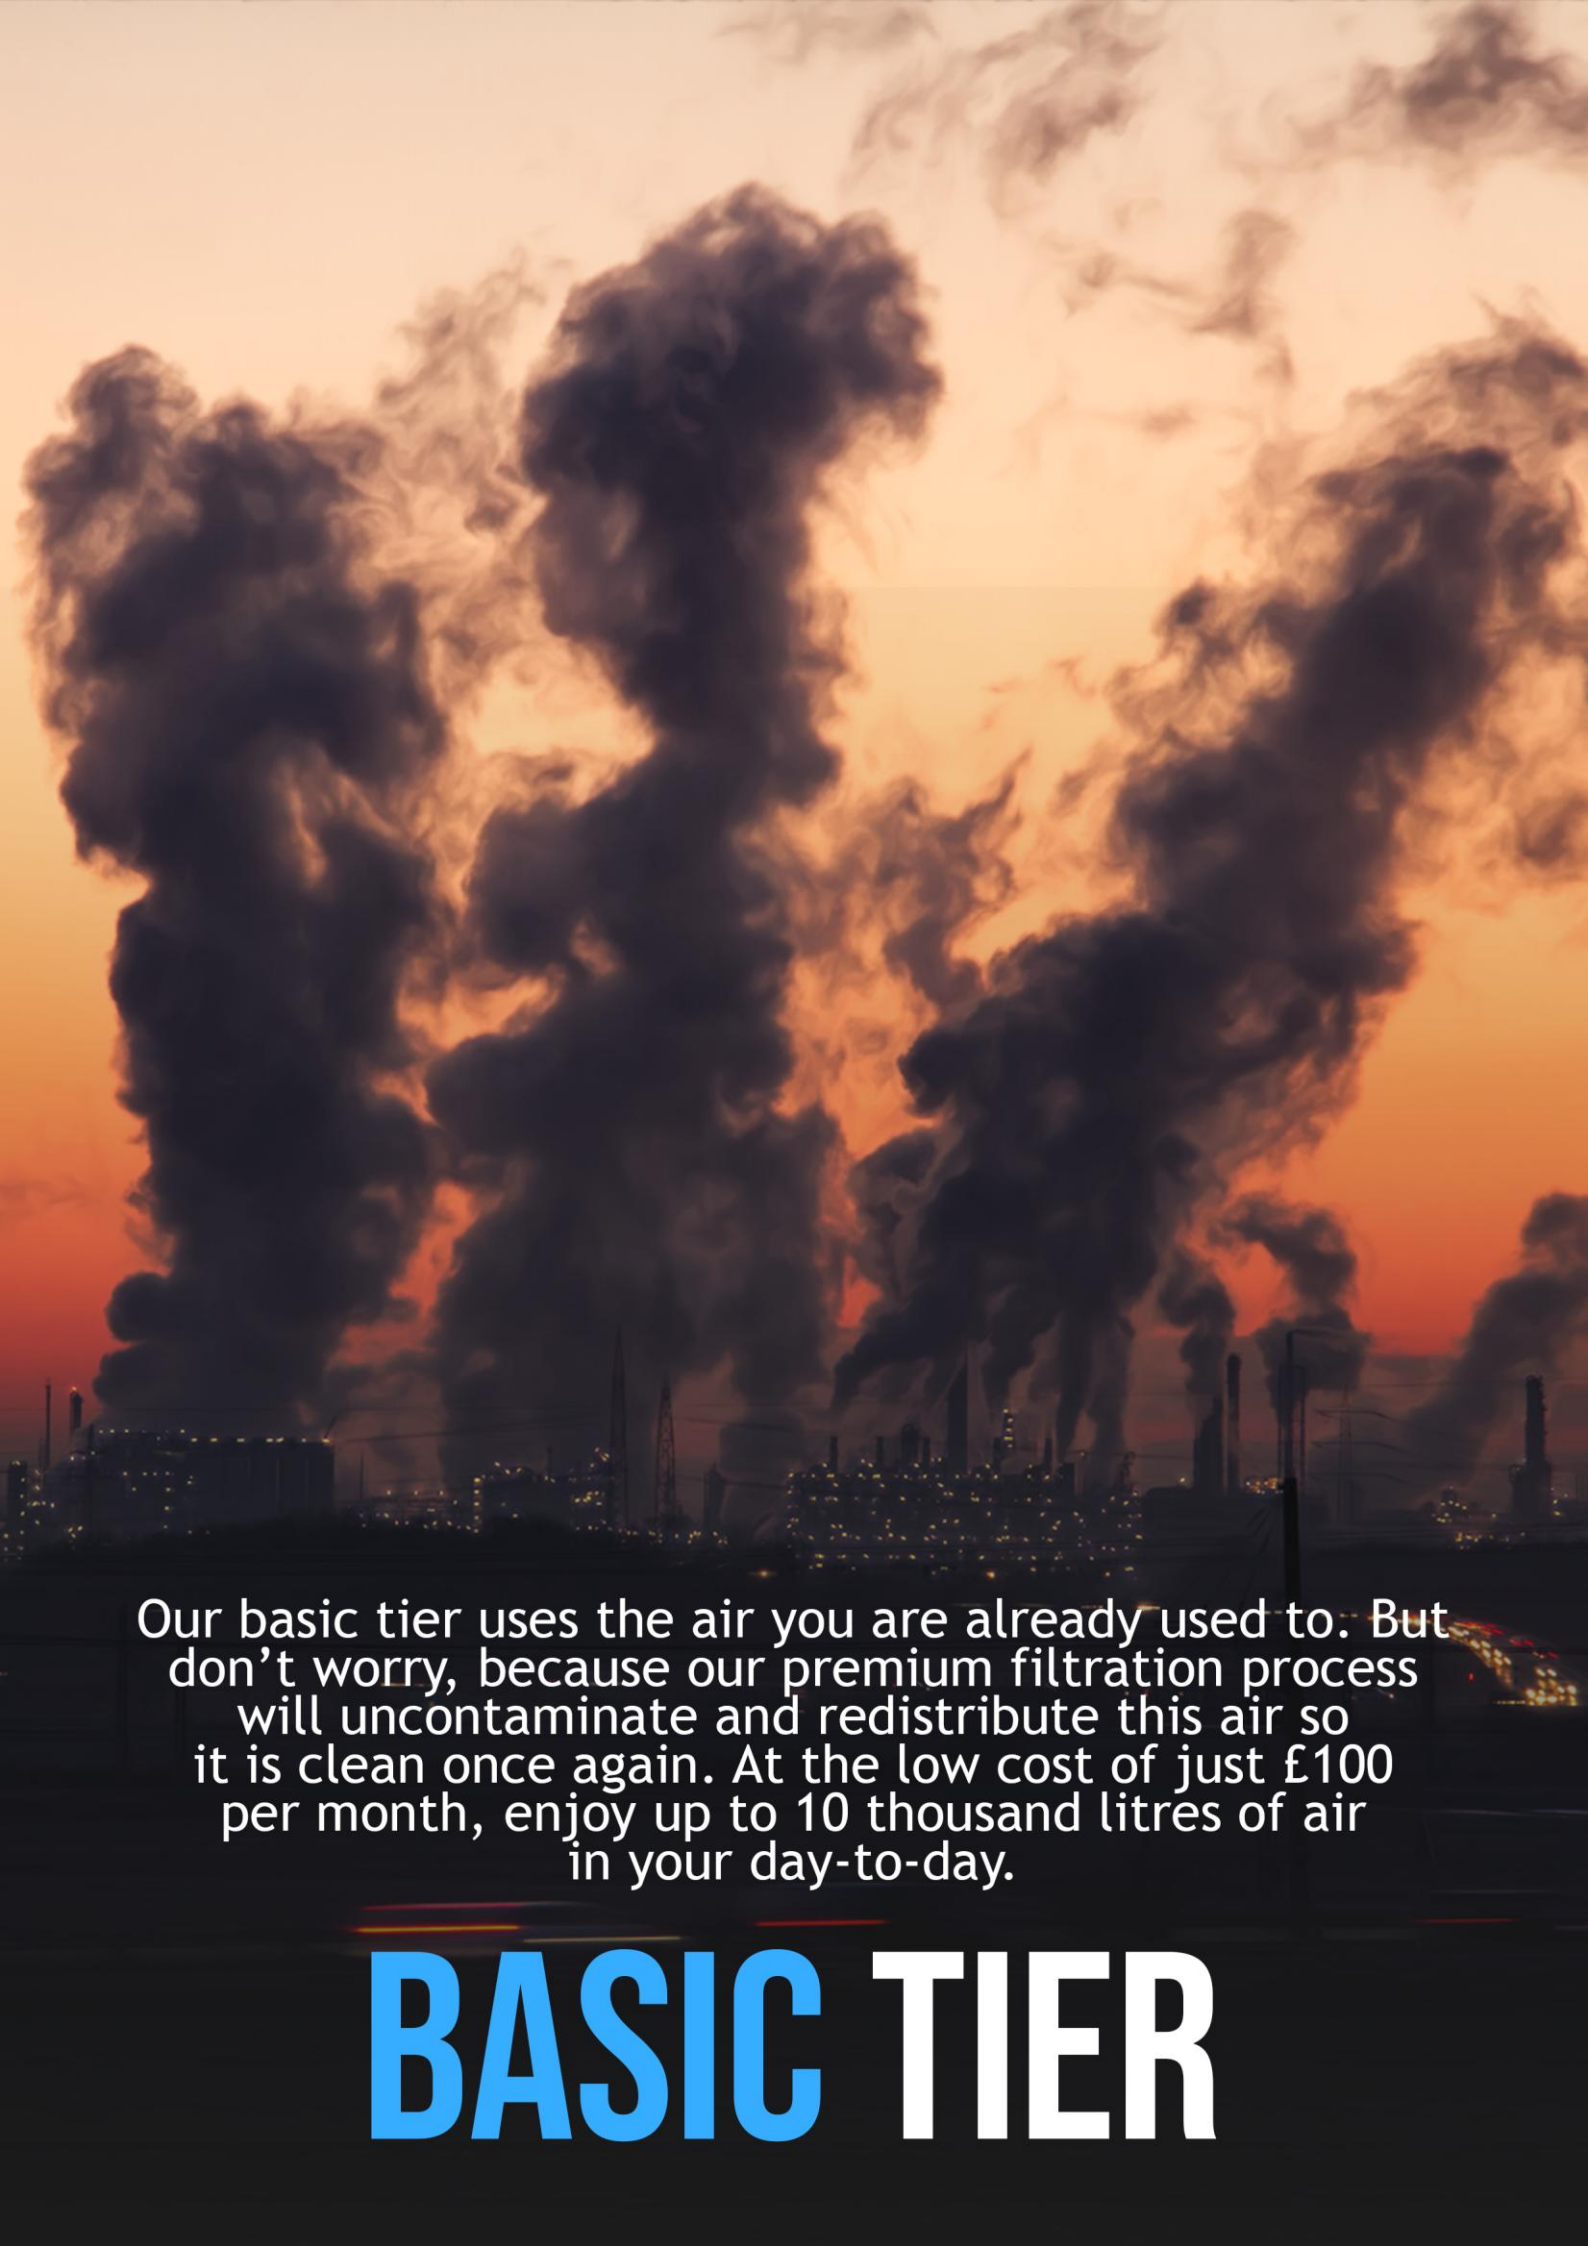

WHAT IS OPEN AIR?

In a world overcome with air pollution, we at OpenAir have set ourselves the mission of bringing back the forgotten luxury of clean air. OpenAir filters and imports clean air from a number of uncontaminated sources, so that you can breathe like we used to 50 years ago.

With our wearable filtration devices, you can experience what breathing is supposed to feel like. The transparent window will ensure your facial expression and mouth will remain readable to the people around you. The mask's dual filters are capable of efficient oxygen delivery to make sure you never have to breathe polluted air again.

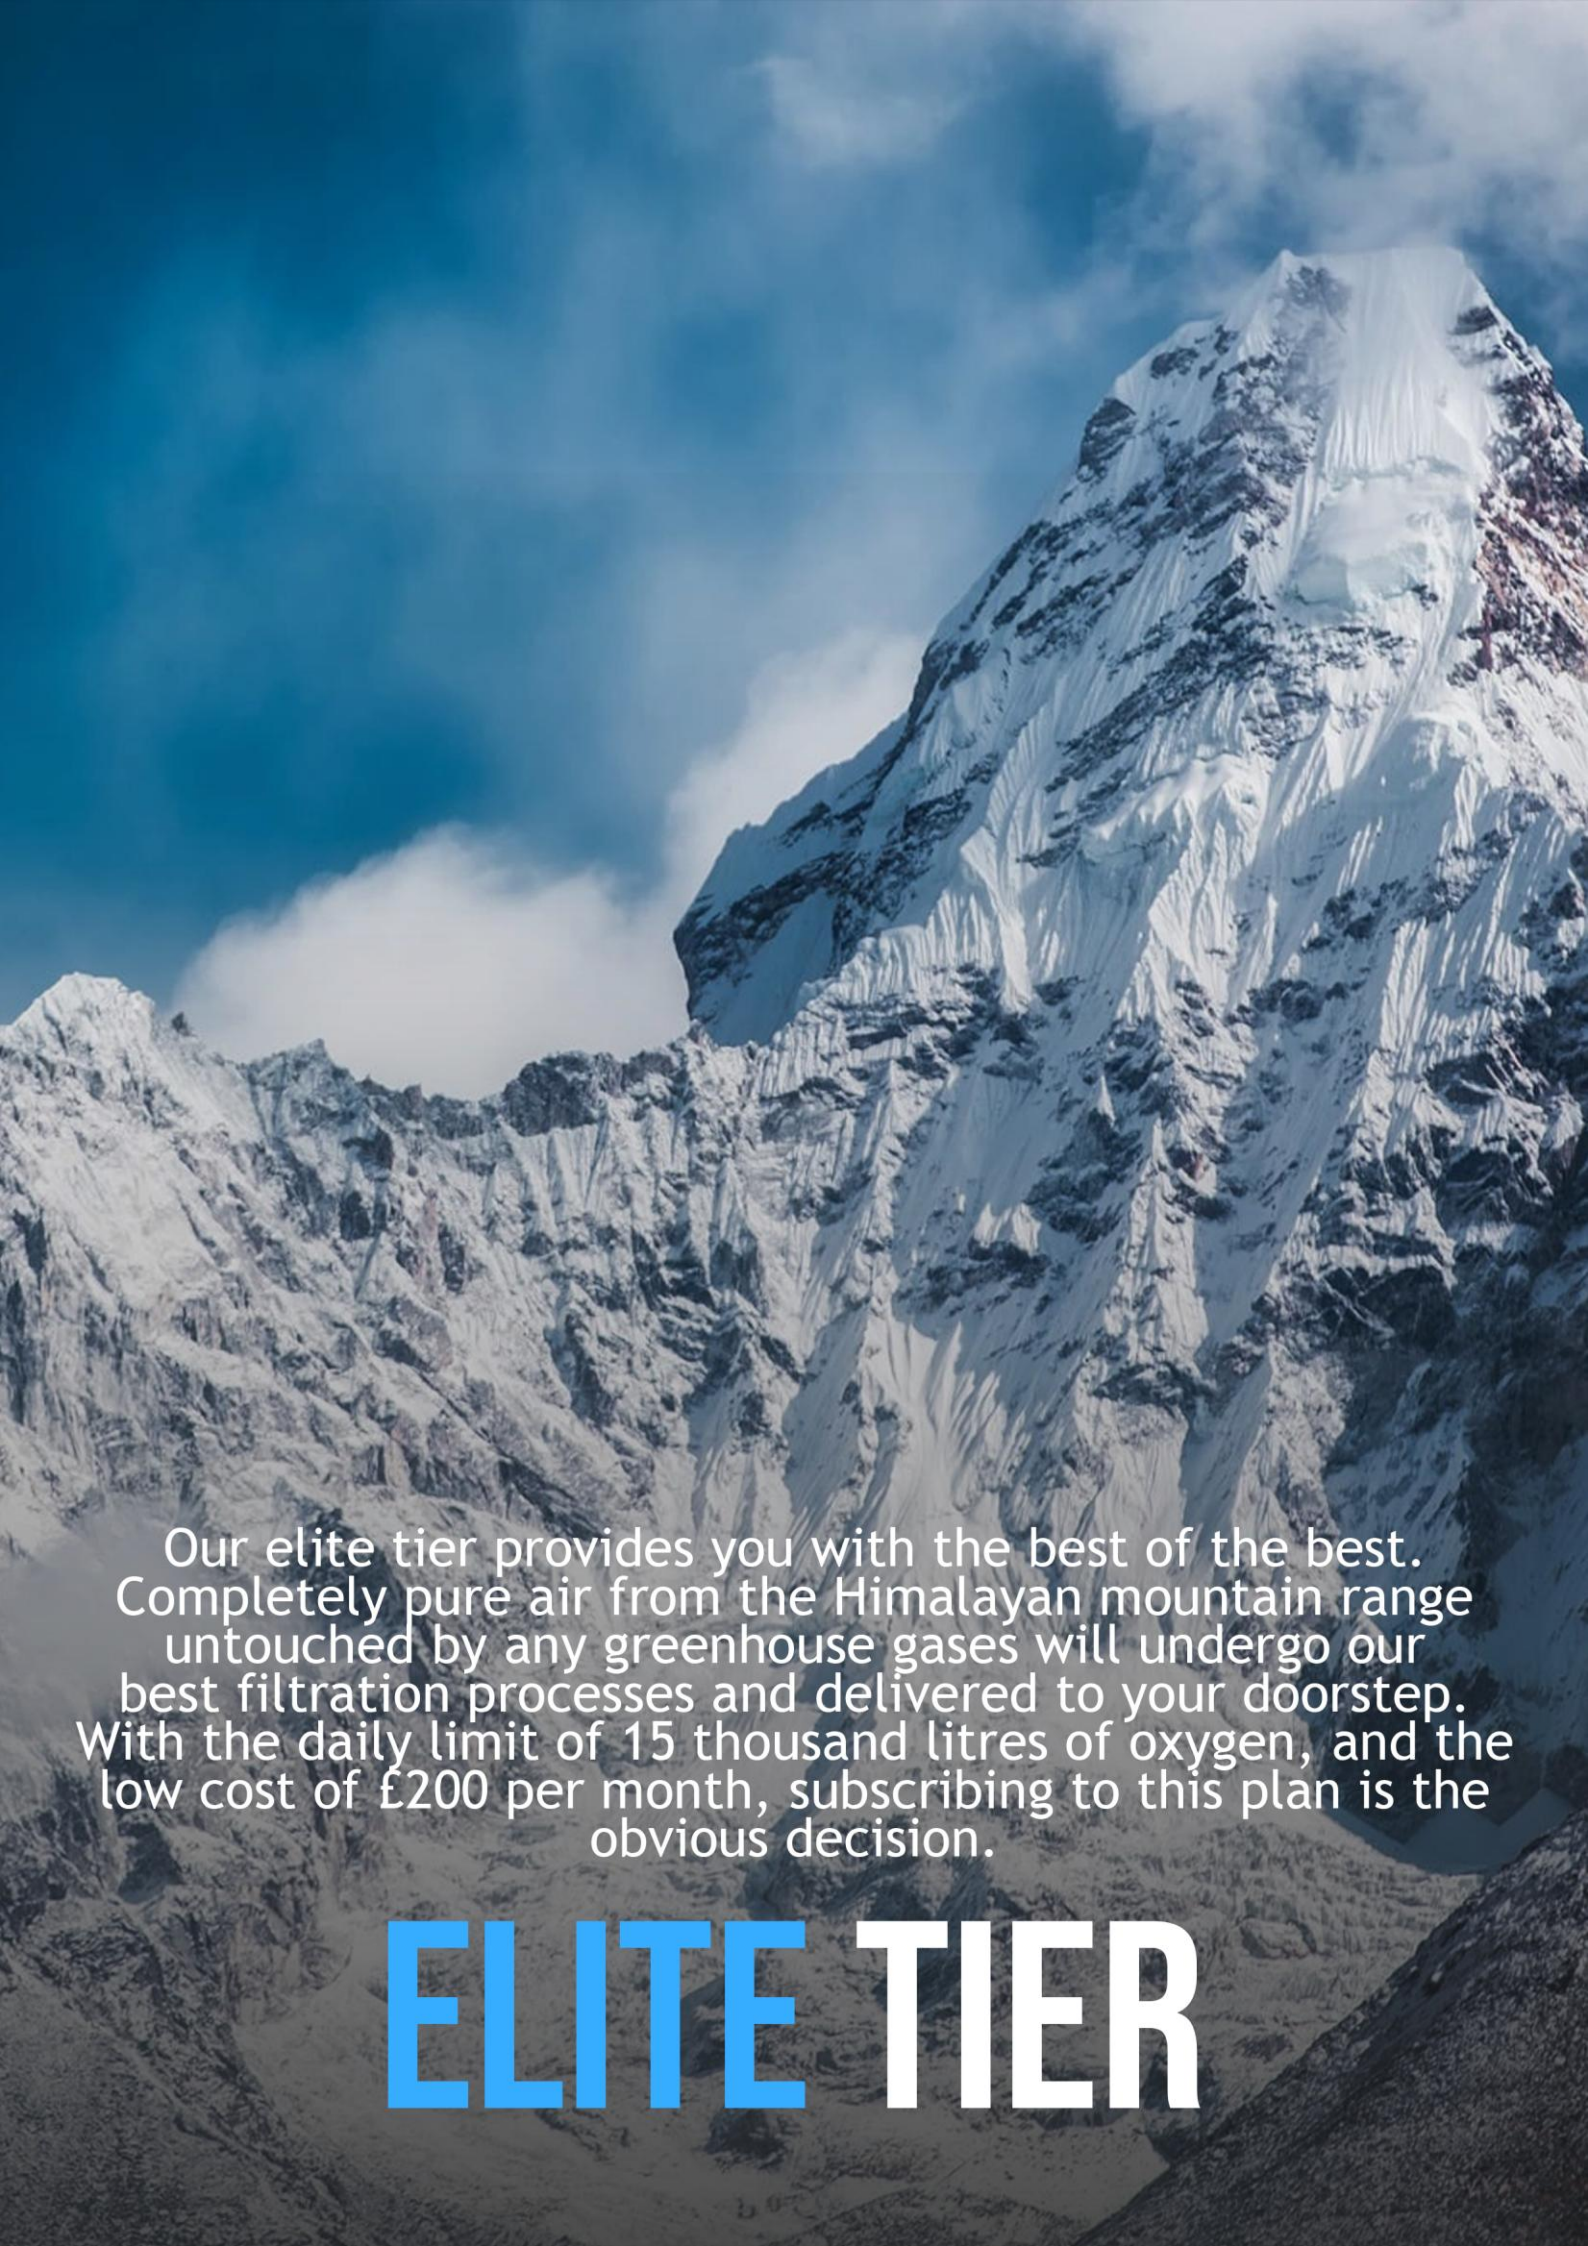

Our basic tier uses the air you are already used to. But don't worry, because our premium filtration process will uncontaminate and redistribute this air so it is clean once again. At the low cost of just £100 per month, enjoy up to 10 thousand litres of air in your day-to-day.

BASIC TIER

Extending from our basic plan, our premium tier imports clean air from the unpolluted Scandinavian landscape, so that you can experience effortless breathing for the cost of £150 per month. Your daily limit of O₂ will also increase, allowing an upward of 12 thousand litres of oxygen.

PREMIUM TIER

Our elite tier provides you with the best of the best. Completely pure air from the Himalayan mountain range untouched by any greenhouse gases will undergo our best filtration processes and delivered to your doorstep. With the daily limit of 15 thousand litres of oxygen, and the low cost of £200 per month, subscribing to this plan is the obvious decision.

OPEN AIR APP

The OpenAir app will coincide with your wearable filtration device to allow you to view your oxygen intake, manage your current plan and view the air quality of your environment.

On the dashboard, you will be able to see the primary information related to the filtration device, such as how much oxygen has been inhaled and the air quality. From the dashboard, you can be directed to manage their subscription plan.

From the subscription page, you may upgrade their plan to Basic, Premium or Elite. A simple press of the button will allow you to change your current plan.

OPEN AIR

Air access is subject to availability, and does not guarantee uninterrupted breathing. Basic tier users may experience reduced respiratory comfort during peak pollution periods. By using OpenAir, users agree to respiratory data monitoring and location sharing. Wearable filtration devices are dependent on an active network connection.
